

Pre-set Case Sealers

Semi-Automatic

An ideal first step to automation, Endoline's range of semi-automatic, pre-set case sealers are simple to both operate and maintain. These case sealers are capable of operating on an array of different sizes, including very narrow and low shelf ready pack (SRP) cases up to very large and heavy cases. The semi-automatic sealers only require a simple manual adjustment using handles for each case size change, keeping downtime to a minimum. Each model is available as a bottom driven or a side driven machine to suit the right application. The pre-set machines also lends itself to having a wide range of printers or labellers mounted to reduce space and cost.

Pre-Set Case Sealing

Endoline design and manufacture a range of high specification pre-set case sealers, to increase the productivity and efficiency of any case sealing operation. From semi-automatic to fully-automatic, each pre-set system seals cases of the same size with either a hot melt glue or self-adhesive tape. Ideal for manufacturers who require secure, accurate and consistent sealing of long runs of the same case size each system incorporates unique performance-enhancing design features with ease of manual change for the next case size and are capable of sealing up to 30 cases per minute. As standard each of the pre-set case sealers is fitted with a floating bridge feature, which allows each machine to accept swollen or out-of-specification cases while providing consistent and accurate sealing.

Fully-Automatic

Fully-automatic, pre-set case sealers are suitable for any manufacture that needs consistent sealing of long runs of the same case size, with no manual intervention. These systems can be used for light single wall cases such as those typically used in the snacks industry up to heavy duty twin wall cases such as those used in the potato industry. The fully-automatic case sealer range is available in both tape sealing and hot melt glue sealing. Running at speeds of up to 30 cases per minute, Endoline's fully-automatic pre-set case sealers are very simple to operate and maintain. Built to Endoline's unique four column construction for added stability the robust chassis enables each machine to run 24 hours a day, 7 days a week with minimal down time and low cost of ownership.

Pre-set Case Sealers

Floating bridge

The floating bridge allows the machine to accept swollen or out-of-specification cases while providing consistent and accurate sealing. A bridge-latch enables quick and easy access to the bottom tapehead for quick tape reload without re-adjustment.

Low Cost of Ownership

High quality components housed in a robust chassis ensure minimal servicing and enable 24 hour operation. These systems are designed for the rigours of typical end-of-line packaging environments. All Endoline's machines are designed for maximum efficiency and productivity thereby reducing the cost of ownership to a minimum.

Twin column construction

The use of our unique twin column design provides added stability for the taping bridge to ensure the machine runs smoothly at all times with minimal interruption and it provides the support necessary for the floating bridge feature.

Efficient

Pre-set case sealing systems are designed for quick and easy manual size change and a tool-free changeover for each case size and can be run by a single operator with automatic taping to improve case packing efficiency.

Interchangeable tapeheads

The instantly removable, interchangeable tape heads are easily loaded and are fitted with integral steel knife guards. This means that fewer spare tape heads are required thereby significantly reducing spare parts costs. Rapid tape reload (top and bottom) can be achieved just by swapping tape heads.

Modified machines

Any of Endoline's case sealers can be modified to suit a specific application, from cases outside the standard size range to specific requested components. Endoline's engineering expertise can look at any request for an application to help meet your requirement.

There are several standard systems from the Endoline pre-set case sealing range which offer a range of high specification features. These systems can be bought as standard, or custom designed to suit specific requirements.

Key systems from the Pre-set case sealing range include:

610 Semi Automatic Pre-Set Case Sealer

- Semi-automatic
- Single operator packing and sealing
- Robust construction

602/607 Fully Automatic Pre-Set Case Sealer

- High speed - up to 30 cases per minute
- 24/7 operation
- Quick size changeover

702 Fully Automatic Pre-Set Case Sealer

- Interchangeable tape units
- Suitable for heavy duty cases
- Modified to meet customer specification

400 series Fully Automatic Pre-set Case Gluer

- Hot melt glue seal
- Consistent Sealing
- Full reliability
